About Service

Sun's mobile classrooms bring training to cities across the United State

Mobile training centers allow easier access to the latest Sun-certified courses in technology

Is the trip too long to the nearest Sun training center? Don't worry, one may be on the road to your town. In an effort to meet customers' requests for easily accessible, hands-on training, Sun mobile classrooms are traveling the United States bringing training to locations that do not have Sun training centers. Sun is trucking in hardware, software and training materials to create fully networked classrooms that enable students to receive Sun's award-winning, quality training with Sun-certified trainers.

Where are the Sun mobile classrooms going to travel?

The first circuit of Sun mobile classrooms began on June 7, training 67 students in Huntsville, Indianapolis, Milwaukee and New Orleans. The classrooms were set up at a variety of Sun sites and third party training centers. The mobile classroom will continue to travel the U.S., training students in an average of five cities per circuit and 25 to 30 cities total. The mobile classroom program will complete four circuits per quarter.

What classes will be taught by the mobile classroom?

In the first circuit, students have the opportunity to complete:

- SA237 - Solaris™ System Admin. I
- SA287 - Solaris System Admin. II
- Java™ Programming

Additional classes will be added to the remaining circuits based on customers' needs.

How much will these classrooms expand Sun's

training?

Sun has over 50 Sun authorized training centers not including the mobile sites. With this program, Sun expands the number of training "centers" by 50 percent. To find out more information, call 1-800-422-8020 or visit the Sun Educational Services website at <http://suned.sun.com/usa.html>.
